Competitive Programming

6.a. Finding Duplicates- $O(n^2)$ Time Complexity (1) Space Complexity

Aim: Find Duplicate in Array.

Given a read only array of n integers between 1 and n , find one number that repeats.

Input Format:

First Line - Number of elements

n Lines - n Elements

Output Format:

Element x - That is repeated

Algorithm:

```
function main()
```

```
{
```

```
    initialize n // Number of elements in the array
```

```
    read n from user
```

```
    initialize arr[n] // Array to hold input values
```

```
    // Read values into the array
```

```
    for i from 0 to  $n - 1$ 
```

```

{
    read arr[i] from user
}

flag = 0 // Initialize a flag to indicate if a duplicate is found

// Search for the first duplicate element
for i from 0 to n - 1
{
    el1 = arr[i] // Current element

    for j from 0 to n - 1
    {
        // Check for duplicates and ensure indices are different
        if el1 == arr[j] and i != j
        {
            print el1 // Print the duplicate element
            flag = 1 // Set flag to indicate a duplicate was found
            break // Exit inner loop
        }
    }

    if flag
        break // Exit outer loop if a duplicate was found
}
}

```

Program:

```
#include<stdio.h>

int main(){

int n;

scanf("%d",&n);

int arr[n];

for(int i=0;i<n;i++){

    scanf("%d",&arr[i]);

}

int flag=0;

for(int i=0;i<n;i++){

    int el1=arr[i];

    for(int j=0;j<n;j++){

        if (el1==arr[j] && i!=j){

            printf("%d",el1);

            flag=1;

            break;

        }

    }

    if(flag)

        break;

}

}
```

Output:

| | Input | Expected | Got | |
|---|------------------------------|----------|-----|---|
| ✓ | 11 10 9 7 6 5 1 2 3 8 4 7 | 7 | 7 | ✓ |
| ✓ | 5 1 2 3 4 4 | 4 | 4 | ✓ |
| ✓ | 5 1 1 2 3 4 | 1 | 1 | ✓ |

6.b. Finding Duplicates- $O(n)$ Time Complexity (1) Space Complexity

Aim: Find Duplicate in Array.

Given a read only array of n integers between 1 and n , find one number that repeats.

Input Format:

First Line - Number of elements

n Lines - n Elements

Output Format:

Element x - That is repeated

Algorithm:

```
function main()
{
    initialize n // Number of elements in the array
    read n from user

    initialize a[n] // Array to hold input values

    // Read values into the array
    for i from 0 to n - 1
    {
        read a[i] from user
    }

    initialize b[n] // Array to keep track of seen elements
    for i from 0 to n - 1
    {
        b[i] = 0 // Initialize the tracking array
```

```

    }

    // Search for the first duplicate element
    for i from 0 to n - 1
    {
        // If the element is already present, i.e., b[a[i]] = 1
        if b[a[i]]
        {
            print a[i] // Print the duplicate element
            break // Exit the loop
        }
        else
        {
            b[a[i]] = 1 // Mark the element as seen
        }
    }
}

```

Program:

```

#include <stdio.h>

int main(){
    int n;

    scanf("%d",&n);

    int a[n];

    for(int i=0;i <n;i++){
        scanf("%d",&a[i]);
    }

    int b[n];

```

```

for(int i=0;i <n;i++){
    b[i]=0;
}
for(int i=0;i<n;i++){
    //if el already present i.e, b[i]=1
    if(b[a[i]]){
        printf("%d",a[i]);
        break;
    }
    else
        b[a[i]]=1;
}
}

```

Output:

| | Input | Expected | Got | |
|---|------------------------------|----------|-----|---|
| ✓ | 11 10 9 7 6 5 1 2 3 8 4 7 | 7 | 7 | ✓ |
| ✓ | 5 1 2 3 4 4 | 4 | 4 | ✓ |
| ✓ | 5 1 1 2 3 4 | 1 | 1 | ✓ |

6.c. Print Intersection of 2 sorted arrays- $O(m*n)$ Time Complexity, $O(1)$ Space Complexity

Aim:

Find the intersection of two sorted arrays.

OR in other words,

Given 2 sorted arrays, find all the elements which occur in both the arrays.

Input Format

· The first line contains T, the number of test cases. Following T lines contain:

1. Line 1 contains N1, followed by N1 integers of the first array
2. Line 2 contains N2, followed by N2 integers of the second array

Output Format

The intersection of the arrays in a single line

Example

Input:

1

3 10 17 57

6 2 7 10 15 57 246

Output:

10 57

Input:

1

6 1 2 3 4 5 6

2 1 6

Output:

1 6

Algorithm:

function main()

```
{  
  
    initialize n // Number of test cases  
    read n from user  
  
    for i from 0 to n - 1  
    {  
        initialize n1 // Size of the first array  
        read n1 from user  
  
        initialize arr1[n1] // First array  
  
        // Read values into the first array  
        for j from 0 to n1 - 1  
        {  
            read arr1[j] from user  
        }  
  
        initialize n2 // Size of the second array  
        read n2 from user  
  
        initialize arr2[n2] // Second array  
  
        // Read values into the second array  
        for j from 0 to n2 - 1  
        {  
            read arr2[j] from user  
        }  
    }  
}
```

```

// Check for common elements in both arrays
for j from 0 to n1 - 1
{
    for k from 0 to n2 - 1
    {
        if arr1[j] == arr2[k]
        {
            print arr1[j] // Print the common element
        }
    }
}
}
}

```

Program:

```

#include<stdio.h>

int main(){
int n;
scanf("%d",&n);
for(int i=0;i<n;i++){
    int n1;
    scanf("%d",&n1);
    int arr1[n1];
    for(int j=0;j<n1;j++){
        scanf("%d",&arr1[j]);
    }
    int n2;
    scanf("%d",&n2);

```

```

int arr2[n2];

for(int j=0;j<n2;j++){
    scanf("%d",&arr2[j]);
}

for(int j=0;j<n1;j++){
    for(int k=0;k<n2;k++){
        if(arr1[j]==arr2[k]){
            printf("%d ",arr1[j]);
        }
    }
}
}
}

```

Output:

| | Input | Expected | Got | |
|---|--|----------|-------|---|
| ✓ | 1 3 10 17 57 6 2 7 10 15 57 246 | 10 57 | 10 57 | ✓ |
| ✓ | 1 6 1 2 3 4 5 6 2 1 6 | 1 6 | 1 6 | ✓ |

6.d. Print Intersection of 2 sorted arrays- $O(m+n)$ Time Complexity, $O(1)$ Space Complexity

Aim:

Find the intersection of two sorted arrays.

OR in other words,

Given 2 sorted arrays, find all the elements which occur in both the arrays.

Input Format

· The first line contains T, the number of test cases. Following T lines contain:

1. Line 1 contains N1, followed by N1 integers of the first array
2. Line 2 contains N2, followed by N2 integers of the second array

Output Format

The intersection of the arrays in a single line

Example

Input:

1

3 10 17 57

6 2 7 10 15 57 246

Output:

10 57

Input:

1

6 1 2 3 4 5 6

2 1 6

Output:

1 6

Algorithm:

function main()

```
{  
  
    initialize T // Number of test cases  
    read T from user  
  
    while T > 0  
    {  
        // Decrement the test case counter  
        T--  
  
        initialize n1, n2 // Sizes of the two arrays  
        read n1 from user  
        initialize arr1[n1] // First array  
  
        // Read values into the first array  
        for i from 0 to n1 - 1  
        {  
            read arr1[i] from user  
        }  
  
        read n2 from user  
        initialize arr2[n2] // Second array  
  
        // Read values into the second array  
        for i from 0 to n2 - 1  
        {  
            read arr2[i] from user  
        }  
    }  
}
```

```
initialize i = 0, j = 0 // Indices for both arrays
```

```
// Iterate through both arrays to find common elements
```

```
while i < n1 and j < n2
```

```
{
```

```
    if arr1[i] < arr2[j]
```

```
    {
```

```
        i++ // Move to the next element in arr1
```

```
    }
```

```
    else if arr2[j] < arr1[i]
```

```
    {
```

```
        j++ // Move to the next element in arr2
```

```
    }
```

```
    else
```

```
    {
```

```
        print arr1[i] // Print the common element
```

```
        i++ // Move to the next element in arr1 j++
```

```
        // Move to the next element in arr2
```

```
    }
```

```
}
```

```
print new line // Move to the next line for output
```

```
}
```

```
}
```

Program:

```
#include <stdio.h>
```

```
int main() {  
  
    int T;  
  
    scanf("%d", &T);  
  
    while (T-->0) {  
  
        int n1, n2;  
  
  
        scanf("%d", &n1);  
  
        int arr1[n1];  
  
        for (int i = 0; i < n1; i++) {  
  
            scanf("%d", &arr1[i]);  
  
        }

6.e. Pair with Difference- $O(n^2)$ Time Complexity, $O(1)$ Space Complexity

Aim:

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that $A[j] - A[i] = k$, $i \neq j$.

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

k - Non - Negative Integer

Output Format:

1 - If pair exists 0 - If no pair exists

Explanation for the given Sample Testcase:

YES as $5 - 1 = 4$

So Return 1.

Algorithm:

```
function main()
{
    initialize n // Number of elements in the array
    read n from user

    initialize arr[n] // Array to hold input values

    // Read values into the array
    for i from 0 to n - 1
    {
        read arr[i] from user
```

```
}
```

```
initialize t // Target difference
```

```
read t from user
```

```
initialize flag = 0 // Flag to indicate if a pair is found
```

```
// Check for pairs with the specified difference
```

```
for i from 0 to n - 1
```

```
{
```

```
    for j from 0 to n - 1
```

```
    {
```

```
        if i != j and abs(arr[i] - arr[j]) == t
```

```
        {
```

```
            flag = 1 // Pair found
```

```
            break
```

```
        }
```

```
    }
```

```
if flag
```

```
{
```

```
    break
```

```
}
```

```
}
```

```
// Output the result based on the flag
```

```
if flag
```

```
{
```

```
    print 1 // Pair found
```

```
    }  
    else  
    {  
        print 0 // No pair found  
    }  
  
    return 0  
}
```

Program:

```
#include <stdio.h>  
#include <stdlib.h>
```

```
int main() {  
    int n;  
    scanf("%d", &n);  
  
    int arr[n];  
  
    for (int i = 0; i < n; i++) {  
        scanf("%d", &arr[i]);  
    }  
  
    int t;  
    scanf("%d", &t);  
  
    int flag = 0;
```

```
for (int i = 0; i < n; i++) {  
    for (int j = 0; j < n; j++) {  
        if (i!=j && abs(arr[i] - arr[j]) == t) {  
            flag = 1;  
            break;  
        }  
    }  
    if (flag) {  
        break;  
    }  
}  
  
if (flag) {  
    printf("%d\n", 1);  
} else {  
    printf("%d\n", 0);  
}  
  
return 0;  
}
```

Output:

| | Input | Expected | Got | |
|---|---------------------------------------|----------|-----|---|
| ✓ | 3 1 3 5 4 | 1 | 1 | ✓ |
